

Windows Setup (PowerShell 7 + Chocolatey)

1. Set Execution Policy in PowerShell 5

PowerShell checks the execution policy before running a script. If the script doesn't meet the requirements (like source or signature), PowerShell blocks its execution. We need to allow scripts to be run.

- Open `PowerShell` with administrative right
- If you use Win 32
 - `New-ItemProperty -Path "HKLM:\SYSTEM\CurrentControlSet\Control\FileSystem" -Name "LongPathsEnabled" -Value 1 -PropertyType DWORD -Force`
- `Set-ExecutionPolicy -ExecutionPolicy RemoteSigned -Scope LocalMachine`
